Setup For Program Monitor Video Control Room

The Program monitor receives signal from V-Mix through NDI. Follow these instructions to assign the Program out from V-Mix to the display.

<u>All operations here are done from the V-Mix computer with V-Mix open and ready to stream.</u>

1. In V-Mix be sure the "External" switch on the bottom menu is on. When on, this button turns red.

2. Move cursor to the "Program Monitor" display. If NDI Studio Monitor software is not running, start it. Make sure that Studio Monitor is moved to the Program Monitor screen.

3. Once NDI Studio is running, moving the mouse cursor will open a three bar menu. One in the menu locate the MSI input and select the one marked "Output 1" This will bring up the program output image from V-Mix.

If V-Mix loses its connection to the NDI server use these steps to reassign it.

1. While in V-Mix, locate the "External" button in the menu bar at the bottom of the screen.
2. Select the settings wheel to the left of the External button.
3. Scroll down to "Output/NDI/SRT Settings and select
4. Select the top menu item "Outputs/NDI/SRT"
5. Locate Output 1 and make sure that 'Output' is selected
6. Then select NDI ON and close out.
7. The program out will then show on the Program display
